

### Levitate - Quick Change Adapter

The Levitate Quick Change Adapter utilizes the widely-accepted pyramid prosthetic system as its foundation. This adapter comprises four distinct parts: the steel pin, the male quick connector, the base plate, and the female connector. The base plate can be fastened to the Levitate or other prosthetic devices using its four-hole configuration with a 36 mm spacing. Using the steel pin along with the base plate and either the male or female quick connector enables users to interchange prosthetic feet or knees in mere seconds. Its design aims to simplify daily tasks and promote easier physical activity by reducing the need for multiple sockets. Adapters can be sold as a kit, or as separate components.

User information	
Amputation level:	Transfemoral and transtibial
Impact Level:	Low to High
Maximum patient weight:	125 kg
Warranty	1 year
